## **1 JOB PROFILES**

## **1.1 Occupational fields**

There are a number of areas of application and fields of activity for graduates of the Bachelor degree course in operational facility and real estate management. The scope and complexity of the activities require the integration of methods and instruments from very different fields of knowledge (e.g. Real Estate Business, facility management, engineering sciences, law, economics, social skills, foreign languages, information and communication sciences). The field of activity consists of all decision-preparing and executive activities that deal with the planning, implementation, organization, control, monitoring, procurement and management as well as utilization of object-related infrastructures. The interdisciplinary design of this qualification profile enables students to operate successfully in the corresponding fields of activity.

The following fields of activity describe possible fields of application, which are based on the life cycle of a property and the resulting operational and practical requirements.

#### New construction, conversion and renovation planning:

The graduates are entrusted with the subject-specific preparation of decisions and, above all, with the implementation of decisions that have been made. In this area, they are in particular demand by consulting firms, architectural and engineering offices, general planners and construction companies, the public sector and building owners. In contrast to the original project development activity, the perspective of the user is placed in the foreground here.

#### Space management:

The graduates contribute substantially to the analysis and optimization of the operational sequences and processes through appropriate space concepts, organization and reorganizations. Ergonomics and workplace design are of great importance. They are primarily employed by companies with a predominant portfolio of office and commercial properties. In addition to simple concepts, they are particularly involved in the implementation and monitoring of such concepts.

#### Real estate management and building operation:

Among the tasks of real estate and facility management at individual property level are real estate management (building management) including contract management and performance measurement. In this context, the classic management activity of a property manager of residential and commercial properties is of particular importance. The operational facility and real estate manager implements the concept of building operation, taking into account aspects of economy, functionality, security and the requirements of different users. Among other things, the analysis of potential savings plays an important role. Facility & real estate management is particularly important for companies that place high demands on their technical facilities (e.g. hospitals, clinics, nursing homes, museums, art galleries, industrial companies).

#### Maintenance:

The integration of economic and technical training content enables the facility and real estate manager to plan and coordinate inspection, maintenance and repair. As a result, they play an important role both in service companies in this area and in companies in which the maintenance concept is applied.

#### Facility services:

The graduates are responsible in companies for the implementation of the given decisions in the area of facility services. They perform this task for external service providers as well as in the internal corporate function. In addition, they are able to critically reflect on the existing scope and need of services, develop proposals as a basis for new decisions and, if necessary, organize and adapt them.

#### Sustainability management:

Sustainability management in real estate is becoming increasingly important, particularly due to the high savings potential. By taking a holistic life cycle approach, the facility and real estate manager can uncover these potentials and make them available to the company. In this function, they are important for consultants as well as for real estate management and facility management companies.

#### Real estate project development and property development:

Graduates are involved in the development of yield- and value-enhancing concepts for developed and undeveloped properties, usually taking into account different usage options. Fundamental market and location analyses as well as profitability calculations of individual construction measures are part of their fields of activity. In these areas, the operational facility and real estate manager is in demand at consulting firms, architectural and engineering offices, general planners and construction companies, the public sector, at the client end and especially at property developers and project developers. The focus here is mainly on simple, executive tasks at the operational level.

#### **Property valuation:**

Graduates are able to value individual properties of the classic types of use (without special properties), especially for marketing purposes. Furthermore, they are entrusted with the preparation of basic information for more extensive valuation projects.

#### Marketing, utilization and leasing:

The facility and real estate manager works at the individual property level within the framework of real estate brokerage and exploitation, i.e. real estate marketing. They support the revenue-optimized utilization of non-essential real estate or the sale of property development measures as well as the sales activities of a real estate agency. The graduates also cover the operative area of real estate leasing.

#### Employment opportunities for graduates in company classes:

- Industrial companies
- Banks, insurance companies
- Municipal administration (municipality, state, federal government)
- Non-profit institutions and foundations
- Educational institutions such as schools, technical colleges, universities
- Consulting company focusing on the real estate sector
- Architectural and engineering offices, general planners, construction companies
- Management companies, real estate trustees such as brokers, administrators, property developers and project developers as well as other service providers in the real estate industry
- Housing companies, housing developers
- Service provider for facility services
- Service companies from various industries, e.g.:
  - Clinics, hospitals, nursing homes and old people's homes
  - Airports, airlines, railway stations, logistics centers
  - Shopping centers and adventure parks
  - Companies for event management
  - Utility and waste management companies
  - Technology, trade, science, innovation centers

- Television and radio stations
- Tourism enterprises
- Retail chains

#### Differentiation to the consecutive Master's degree Facility & Real Estate Management:

While the graduates of the consecutive Master's degree in Facility & Real Estate Management are active in the management of the above-mentioned companies and thus develop concepts and strategies as well as take on tasks for the CEO Managing Director, the work area of the graduates of the Bachelor degree in Facility & Real Estate Management is in the operative processing of Facility and Real Estate Management tasks.

The Bachelor course takes this into account by imparting basic and core competencies oriented to the operative business areas. In addition, the students receive comprehensive complementary competences for their professional activities. In the Bachelor course, they acquire competences to formulate arguments and substantiate them professionally as well as to solve problems. They learn the ability to collect and interpret relevant data in order to support assessments and take into account relevant social, academic and ethical concerns. Students will learn how to communicate information, ideas, problems and solutions to both experts and laypersons. In the Bachelor course, they develop the learning strategies they need to continue their studies with maximum autonomy.

## **1.2 Qualification profile**

The qualification goals and learning outcomes of the Bachelor degree program Facility & Real Estate Management correspond both to the academic and vocational requirements and to the ISCED level 0788<sup>1</sup> International Standard (Classification of Education). The contents conveyed qualify the graduates for the professional fields of activity mentioned in the previous chapters.

The main focus of the course lies in the fundamental technical, economic and legal contexts of the industry as well as in imparting knowledge of quantitative and qualitative approaches in the field of academic methods for the implementation and application of business and academic problems, analyses and research work. In particular, methods and concepts that are generally necessary for solving problems in the real estate sector and in the facility sector are dealt with. This includes knowledge of real estate development and valuation, as well as facility services and building management. In addition, there are complementary skills in the modules Social Skills and Foreign Languages. The application of specialist knowledge and feedback from current practice and research takes place in the practical transfer module with practical projects and the professional internship. Integration and transfer from the field of research takes place within the framework of the module Scientific & Empirical Methods on the one hand and the two modules Practice Project I/II on the other. The following modules and courses are intended to achieve the core competencies in facility management and the real estate industry:

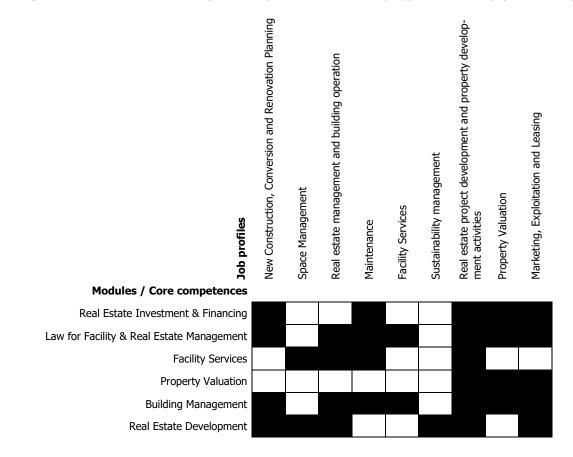

- Real Estate Investment & Financing
- Law for Facility & Real Estate Management
- Facility Services
- Property Valuation
- Building Management

<sup>&</sup>lt;sup>1</sup> Example 4: A program consisting of 40% engineering (071), 30 % business (041) and 30 % languages (023) should be classified as 0788 ("Inter-disciplinary programs and qualifications involving engineering, manufacturing and construction") as no field predominates but 07 is the leading broad field. If engineering and business were equally important and greater than languages (e.g. 40 %, 40 % and 2 0%), the program would be classified as either 0788 or 0488 depending on which program, engineering (071) or business (041), is listed first in the program title (or, if not in the title, in the curriculum or syllabus).

• Real Estate Development

The core competences taught in the study course Facility & Real Estate Management are shown in the following table in connection with the job descriptions for which they appear necessary (black fields).

The following table shows the respective occupational fields of activity and their defined tasks as well as the associated competences. The corresponding modules are assigned to the listed competences.

#### Competence descriptions according to occupational fields of activity

Occupational field of activity	vity       Can take measurements and make simple building designs         v Construction, version and Rention Planning       Preparation of decisions on construction projects         Can incorporate technical builing requirements into a planned project         Can incorporate technical builing requirements into a planned project	Competence description	Competence allocation	Curricu- lum/modules
		Can take measurements and make simple building designs	Professional-Aca- demic Competen- cies/ Technology	Civil Engineering II

Course language (specify)	Percentage of English-lan- guage teaching events 23.21%	Percentage of English-lan- guage teaching events 22.73	The percentage of English-lan- guage courses amounts to at least 20% of the WSH
<b>Internship</b> (semester information, duration in weeks (at 40 h per week) per semester))	6th semester, 12 weeks	6th semester, 5 weeks	

#### Resulting from the merging of the study programs or from the separation from

the study program

(StgKz; to be specified only for merging or separation)

## 2.2 Curriculum

The following description of the courses does not include the work involved in supervising Bachelor theses. An expenditure of 0.2 WSH is planned for each supervised work, i.e. for 30 (ft) & 25 (pt) students an additional AWSH expenditure of 11 AWSH, which are incurred in the 6th semester. In total, an AWSH sum of 217.72 AWSH<sup>2</sup> is achieved over all 6 semesters.

Depending on the learning and teaching method, group divisions are necessary within the individual modules. Since these are usually not valid for the entire module, the curriculum matrix gives the mean value of the number of groups, weighted according to the ratio of learning and teaching methods with and without group divisions.

## Summary curriculum data

Description	WSH	ASWS	ALVS	ECTS
Total number of courses over all semesters	86	105.5	1582.5	180
Total number of courses in 1st year of study	34	43	645	60
Total number of courses in 2nd year of study	30	33	495	60
Total number of courses in 3rd year of study	22	29.5	442.5	60
Total number of technical events over all semesters	44.5			105
Percentage of technical courses over all semesters based on WSH / ECTS	51.74 %			58.33 %
Total number of courses in English over all semesters	16.5			30
Proportion of courses in English over all semesters based on WSH / ECTS	21.43 %			17.86 %
Proportion of eLearning units over all semesters based on WSH / ECTS	28.66 %			32 %

## 2.2.3 Module descriptions full-time

Module number:		Scope:	
GIM	Fundamentals Real Estate Management		ECTS
Degree program	University of Applied Sciences Bachelor's Program Facility & Real Estate Management full-tim	e	•
Position in the curriculum	1. Semester		
Level	1. Semester: 1st semester: Introduction		
Previous knowledge	1. Semester: none		
Blocked	no		
Participant group	A-levels and/or corresponding previous training, beginners		
Literature recommendation	<ul> <li>Fundamentals of the Real Estate Industry /ILV / LV-Nr: GIM / 1.Semester / ECTS: 6</li> <li>Malloth, T., et at., 2013. Immobilienmanagement Österreich. 5th edition. Vienna: ÖVI</li> <li>Wendlinger, P., 2018. Immobilienkennzahlen. 2nd edition. Vienna: Linde.</li> <li>Brauer, K., et al., 2019. Grundlagen der Immobilienwirtschaft. 10th edition. Wiesbaden: Ga</li> </ul>	bler Verlag.	
Acquisition of skills	Eundamentals of the Real Estate Industry /ILV / LV-Nr: GIM / 1.Semester / ECTS: 6 The students are able to: • Recognize and understand real estate economic interrelationships • Record questions relating to the real estate industry • Understand the fundamentals of real estate economics including concepts and terms for sub courses and argue with real estate economics terminology	osequent in	-depth
Course contents	<ul> <li>Fundamentals of the Real Estate Industry /ILV / LV-Nr: GIM / 1.Semester / ECTS: 6</li> <li>Players in the real estate industry</li> <li>Documents and information about the property</li> <li>Factors influencing the property</li> <li>Terminology and key figures in the real estate industry</li> <li>Fundamentals of legal relationships in the real estate industry (rights and standards)</li> <li>Fundamentals of aspects specific to space and building regulations</li> </ul>		
Teaching and learning methods	Fundamentals of the Real Estate Industry /ILV / LV-Nr: GIM / 1.Semester / ECTS: 6 Blended Learning		
Evaluation Methods Criteria	Fundamentals of the Real Estate Industry /ILV / LV-Nr: GIM / 1.Semester / ECTS: 6 Written exam

# 2.3 Internship

The students choose an internship independently. They can draw on the extensive range of internship advertisements offered by the Kufstein University of Applied Sciences. The Director of Studies checks the professional correspondence of the internship activities with the contents of the course and the qualification profiles of the course of studies. Subsequently, the Director of Studies checks whether the internship corresponds to the training objectives of the program and whether the student can be employed according to his/her level of qualification. If these requirements are met, the organizational processing is carried out by the International Relations Office (IRO). A detailed internship guide supports students in organizing their internship semester; students can also contact the IRO and the Director of Studies if they have any questions or need support.

Students must apply for the internship using the form (= job description). The form contains the central data of the student and the internship supervision as well as the goals and the tasks/activities in the company providing the internship. The internship is confirmed or approved by the signatures of the Director of Studies and the internship supervisor.

The student must reflect, document and present the experiences and findings gathered and evaluate the internship. Conversely, the internship supervisor must evaluate the students. The student must prepare an interim report, a final report and a presentation and complete an evaluation form. At the beginning of the internship, he/she will receive an internship guide which lists the points to be worked on. A key requirement is to compare the agreed objectives with the achieved ones. The documentation prepared by the student and the supervisor is evaluated by the Director of Studies. If the achievement of the goals and the adaptation to the qualification level of the student are not guaranteed, the corresponding internship position is excluded for the future. A list and reports on the internships are available to subsequent students via the Moodle teaching platform.

# 2.4 Semester Abroad

The semester abroad is arranged in the 3rd semester of the full-time organizational form. The students deepen their basic knowledge from the first two semesters in business administration and economics as well as in academic and empirical methods. In addition, they acquire competences in communicative processes and presentation. The heterogeneity of the possible teaching contents - which is given by the different partner universities - leads to an individual further development of each individual student within the framework of the curriculum-related broad competence acquisition in the semester abroad. This strengthens and expands individually existing competences and leads to a desired differentiation and individualization of the students in the context of their studies.

In addition to the subject content, the full-time students deepen their knowledge of foreign languages, which they have acquired or expanded in the modules Foreign Language I & II and in the Englishlanguage modules. The application of the foreign language knowledge in the university, as well as in daily life, leads to an intensive deepening. In addition, there are competences in intercultural interaction, communication and conflict resolution. Students are able to understand and question different approaches to specific problems in facility management and the real estate industry. They can describe the dynamics of culture, identity and intercultural encounters and comment on values, stereotypes and prejudices. They also learn about intercultural differences in the energy industry. With this acquisition of competence, students gain the opportunity to gain a professional foothold in an international context and to take on tasks in multinational companies or with international business partners.

The FH Kufstein Tirol has been awarded the Erasmus Charter, which is regarded as a European standard of excellence in supporting student and staff mobility. In addition, the objectives of the Bologna Process on the mutual recognition of diplomas will be fully implemented. The implementation is based on the European Credit Transfer System-ECTS for calculating students' performance and the Diploma Supplement. In these areas the FH Kufstein Tirol was awarded the ECTS Label and the Diploma Supplement Label.

The International Relations Office (IRO) of the FH Kufstein, in cooperation with the degree courses, organizes an information event in the winter semester of each year on the topics of "semesters abroad and internships", as well as the annual "Exchange Fair". The course of studies promotes the exchange of students from different years in order to pass on organizational experiences around the semester abroad. In addition, the IRO and the course team are constantly available for advice.

The part-time students acquire the same curricular knowledge in the 3rd semester. In addition, the module "International Facility Management & Real Estate Development - Practice, Research & Study Trip" in the 6th semester provides intercultural skills. These serve as competences for an international professional career.

# **3 ADMISSION REQUIREMENTS**

The admission requirements at the FH Kufstein Tirol are regulated according to the following terms:

1. The general admission requirements are regulated by § 4 FHG as amended; it applies to **persons with a general university entrance qualification**.

2. **Persons without a school-leaving certificate** must take a **university entrance examination** according to § 64 a UG 2002 as amended. These persons acquire the general university entrance qualification for Bachelor studies in a specialization group by passing the university entrance examination in accordance with an ordinance issued by the Rector's Office of a University. The successful completion of the university entrance examination thus entitles the holder to admission to all studies in the specialization group for which the university entrance qualification was acquired. The university entrance examination can be obtained for certain groups of subjects in accordance with an ordinance of the Rector's Office of a university, whereby the following group of subjects is relevant for the FH Kufstein: Social and economic studies (e.g. Business Administration, Economic Education, Statistics, Sociology).

Applicants who have completed a 3-year **vocational, middle school**, a **training in the dual system** or a **subject-relevant German advanced technical college certificate** obtain the entitlement to study at the FH Kufstein Tirol through additional examinations in the subjects German, English and Mathematics. In the case of the German advanced technical college certificate, the additional examination must only be taken in those of the three subjects in which the grade is "inadequate" or worse. All additional examinations must be passed before the start of the third semester.

3. For **individuals with relevant dual training** the **apprenticeship certificate** in one of the following **special fields** according to the respectively valid announcement of the Federal Ministry of Economics, Family and Youth is valid as an admission requirement:

- Construction
- Banks
- Office, Administration, Organization
- Chemistry
- Electrical Engineering, Electronics
- Trade
- Information and Communication Technologies
- Metal Technology and Mechanical Engineering
- Transport and Storage

4. **Persons with a degree** from one of the relevant **vocational middle schools** listed below may also be admitted:

- Commercial schools (at least two years)
- Vocational, technical and applied arts schools (at least three years)
- Vocational schools for economic professions (at least three years)
- Vocational schools for agricultural and forestry occupations (at least three years)
- Commercial schools (at least three years)

Newly emerging apprenticeships in similar fields must be recognized accordingly.

The **group of persons under numbers 3. and 4.** must complete **additional examinations** by the beginning of the third semester as an entry requirement and, if necessary, take appropriate preparatory courses. This is possible at the FH Kufstein.

The following additional examinations are required for this group of people:

- German
- English
- Mathematics

Below is an overview of which subject area of the German FOS/BOS is the relevant admission requirement. Here, additional examinations must be taken within the first semesters in the subjects Mathematics, German and English (if a grade of "poor" or worse was achieved in these subjects).
